We use Data Analytics in everyday life without even knowing it.

For Example, In College

Plan: The College checks the goals for analysis for different students with different subjects to increase their efficiency.

Prepare: College track the data from their Computer during online Exams to get the data of student study behavior.

Process: College will use this data and analysis it what the outcome is.

Analyze: will check the result and generate insights of student.

Share: College will share this info with teachers and students

Act: College will take decision on the data, which teacher to change for which subjects, where students are lacking and in which subjects' teachers are good but students are lacking.
